AMENDMENT TO THE CLAIMS

Listing of claims:

This listing of claims will replace all prior listings of claims in the application:

Claim 1. (Previously presented): A bioreactor method of processing a fluent biomass involving

direct discharge of a waste sludge and withdrawal of a cleansed effluent by membrane filtration,

comprising the steps of providing an internally divided tank having a volumetrically large

chamber within which the fluent biomass is biologically treated and a volumetrically small

chamber within which said membrane filtration is performed; lowering contamination of a

separated portion of the biologically treated fluent biomass recycled from the large chamber of

the tank into the small chamber of the tank by performing said membrane filtration in the small

chamber of the tank; and effecting said withdrawal from the small chamber as the cleansed

effluent said portion of the wastewater after undergoing said membrane filtration.

Claim 2. (Original) The method as defined in claim 1, wherein said step of lowering the

contamination is performed outside the tank by centrifugation.

Claim 3. (Previously presented) The method as defined in claim 2, wherein said step of

withdrawing the cleansed effluent is interrupted under selective control, while the waste sludge is

undergoing direct discharge in by-pass relation to the small chamber.

6

Appln No. 10/758,559 Navy Case No. 96,046

Amendment in Reply to Final Office action dated Dec. 6, 2005

Claim 4. (Previously presented) The method as defined in claim 1, wherein said step of withdrawing the cleansed effluent is interrupted under selective control, while the waste sludge is undergoing direct discharge in by-pass relation to the small chamber.

Claim 5. (Original) The method as defined in claim 4, wherein the fluent biomass is wastewater having bacteria and a concentration of solids therein establishing said contamination that is lowered within said portion thereof undergoing said membrane filtration.
